

**RoHS Compliant**  
**TX-1330nm/RX-1270nm Single Fiber Bi-direction XFP Transceiver**  
**10G Base Ethernet, SONET OC192, SDH STM-64**

### Features

- 10G Base Ethernet, SONET OC192 and SDH STM-64 application
- Bi-Direction link distance up to 20km
- Simplex LC connector
- Power consumption < 1.5W
- Compliant with XFP MSA INF-8077i
- Differential CML inputs and outputs
- Single power supply 3.3V
- TTL signal detect indicator
- Hot Pluggable
- Class 1 laser product complies with EN 60825-1

### Block Diagram of Transceiver

#### MOD\_NR

The Mod\_NR is an output pin that when High, indicates that the module has detected a condition that renders transmitter and or receiver data invalid, shall consist of logical OR of the following signals:

- Transmit Signal Conditioner Loss of Lock
- Transmitter Laser Fault
- Receiver Signal Conditioner Loss of Lock

#### MOD\_DESEL

The Mod\_DeSel is an input pin. When held Low by the host, the module responds to 2-wire serial communication commands. The Mod\_DeSel allows the use of multiple XFP modules on a single 2-wire interface bus. When the Mod\_DeSel pin is “High”, the module shall not respond to or acknowledge any 2-wire interface communication from the host.

#### **INTERRUPT**

Interrupt is an output pin. When “Low”, indicates possible module operational fault or a status critical to the host system.

#### **TX\_DIS**

TX\_DIS is an input pin. When TX\_DIS is asserted High, the XFP module transmitter output must be turned off.

#### **MOD\_ABS**

Mod\_ABS is pulled up to Host\_Vcc on the host board and grounded in the XFP module. Mod\_ABS is then asserted “High” when the XFP module is physically absent from a host slot.

#### **RX\_LOS**

The RX\_LOS when High indicates insufficient optical power for reliable signal reception.

#### **P\_DOWN/RST**

This is a multifunction pin for module Power Down and Reset. The P\_Down/RST pin must be pulled up to VCC3 in the XFP module.

#### **POWER DOWN FUNCTION**

The P\_Down pin, when held High by the host, places the module in the standby (Low Power) mode with a maximum power dissipation of 1.5W. This protects hosts which are not capable of cooling higher power modules which may be accidentally inserted.

1. Module ground pins Gnd are isolated from the module case and chassis ground within the module.
2. Shall be pulled up with 4.7K-10Kohms to a voltage between 3.15V and 3.45V on the host board.
3. The 1.8 V power supply can be optionally programmed to voltages lower than 1.8 V in modules supporting the variable power supply.

**Eye Safety Mark**

<p>The LS3 series single-mode transceiver is a class 1 laser product. It complies with EN 60825-1 and FDA 21 CFR 1040.10 and 1040.11.
